Th MAILING DATE of thi Period for Reply	s communication appe	ears on the cover sheet with the c	orrespond nce ad	dress		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3746

Objections To Claims

Claim 6 is objected to under 37 CFR 1.75(a) for the following resons:

Dependent claim 6 describes a baseplate as "positioned upstream of the respective exit ends" of a plurality of catalytic combustion modules. This limitation however is also recited in parent claim 1 (lines 9-10), hence, claim 6 is redundant with its parent claim. It appears that applicants may have intended claim 6 to contain further material including the actual dimensions specified in corresponding claim 12. If this is the case, claim 6 should be amended accordingly.

Allowable Subject Matter

Claims 1-5 and 7-12 are allowed, and claim 6 will also be allowed if amended to overcome the objection set forth above.

Reasons for Allowances

The invention in this case involves a catalytic combustor comprising a series of catalytic combustion modules circumferentially arranged about a central core region and communicating with a downstream burnout zone. Such combustor arrangements are known in the prior art as shown, for example, by Newburry (PTO 1449); note catalytic

Art Unit: 3746

assembly 21 arranged around core area 15 upstream of burnout zone 60 (Fig. 1), and note also that the catalytic assembly may comprise circumferentially spaced modules 50 (Fig. 3). Neither Newburry nor the other references of record, however, show or fairly suggest such a combustor in which the core area has no burner and further comprises a face plate located upstream of the catalytic modules' exit ends and defining a

recirculation zone as specified in the present claims. The claimed invention is therefore

Additional References

Nash et al, Mosier et al, and Kappler et al are cited as disclosing further pertinent examples of prior art catalytic combustors.
